# Lekha Reddy Surakanti

513-512-1761 | lekhareddy16@outlook.com | linkedin.com/in/lekhareddy16 | github.com/lekhareddy15 | Cincinnati, OH

## Summary

Highly accomplished Master's student in Computer Science holding a 3.9/4.0 GPA with a strong foundation in software systems, backend development, cloud technologies, and AI/ML workflows. Adept at designing scalable systems, building reliable applications, and solving complex engineering challenges using Python, Java, React, Node.js, Spring Boot, AWS, and Azure. Recognized for strong analytical thinking, attention to detail, and the ability to rapidly learn and innovate in fast-paced environments. Seeking an opportunity to contribute to modern engineering teams by delivering impactful, high-quality technical solutions across diverse domains.

## Education

**University of Cincinnati** — Aug 2024 – May 2026
*Master of Science in Computer Science- GPA: 3.9/4.0* — *Cincinnati, OH*

**Keshav Memorial Institute of Technology** — Aug 2020 – May 2024
*Bachelor of Technology in Computer Science & Engineering - GPA: 9.0/10* — *Hyderabad, India*

## Experience

**Software Engineer – Backend, Cloud & AI** — Nov 2025 – Present
*Gilman Construction Media* — *Temecula, CA (Remote)*

- Designed and built scalable backend services and media-processing systems using AWS Kinesis, S3, IAM, and CloudWatch, ensuring high availability, low latency, and operational stability for real-time video streaming workflows. Developed and optimized RESTful APIs, improving system performance and reliability while applying strong system design principles such as load balancing and event processing.
- Integrated ML pipelines and automation workflows for video analysis and data processing, increasing deployment efficiency by 30% and reducing manual data handling by 50%. Collaborated in Agile sprints, performing code reviews, debugging complex production issues, and supporting QA validation to maintain enterprise-grade engineering quality and system resilience.

**Software Engineer** — Jan 2025 – Oct 2025
*Elevance Systems* — *Cupertino, CA (Remote)*

- Engineered an AI-powered enterprise search platform using React, Python/Node.js, and modern API standards, improving internal data accessibility by 35% and reducing retrieval time by 40% across multiple engineering teams. Improved system responsiveness and scalability by optimizing front-end components, implementing efficient API request flows, and applying best practices in caching and state management.
- Integrated intelligent AI-generated summaries and semantic retrieval features, reducing documentation workload by 30% and enhancing search accuracy and user experience. Worked cross-functionally in an Agile environment, contributing to architecture discussions, sprint planning, testing cycles, and continuous delivery of production features.

**Software Engineer** — Jun 2023 – Jun 2024
*Brane Enterprises Private Ltd* — *Hyderabad, India*

- Designed and implemented optimized UI components and performant backend SQL logic, improving system throughput by 25% and strengthening production reliability. Built and deployed a Python-based NLP chatbot, applying modular design, API integration, and ML workflows to improve customer response speed by 30%.
- Collaborated with engineering and product teams to build scalable feature enhancements, decreasing user-reported issues by 70%. Actively contributed to design reviews, code quality improvements, automated testing, and clear technical documentation across the SDLC.

## Project

**Retail Analytics Platform** | *Azure, Python, ML, SQL, Data Pipelines, Web Dev* — Sep 2024 – Dec 2024

- Architected an end-to-end retail analytics platform on Azure to analyze customer engagement and purchasing behavior. Developed machine learning models to predict Customer Lifetime Value (CLV) and customer churn with improved accuracy and actionable insights. Built scalable Azure-based data pipelines to ingest, clean, and process 10,000+ transaction records for downstream analytics and model training.

**Blockchain ATM** | *Node.js, React.js, HTML, CSS, MongoDB, Flutter, Solidity, Metamask* — Feb 2023 – May 2023

- Developed a mobile application enabling secure cryptocurrency exchange and real-time display of prices. Implemented transaction processing through secure digital wallets via QR code scanning. Deployed Solidity smart contracts to verify transactions on-chain for security. Optimized the end-to-end transaction flow, improving processing speed and overall user experience.

**Microservices Aligned Online Bank Transaction** | *MongoDB, Next.js, Node.js, Kubernetes* — Jun 2022 – Sep 2022

- Engineered a microservices-based banking system capable of securely handling over 2,000 daily transactions. Built core RESTful API services for Credit, Debit, and Transfer transactions. Containerized services with Docker and orchestrated with Kubernetes for scalability and system resilience. Implemented centralized logging and monitoring to improve system visibility and reduce debugging time.

## Technical Skills

**Programming Languages**: Python, Java, JavaScript, TypeScript, C++, C, SQL, HTML/CSS
**Web Technologies & Frameworks**: React.js, Next.js, Node.js, Express.js, Spring Boot, REST APIs, GraphQL, Firebase
**AI/ML**: PyTorch, Natural Language Processing (NLP), Machine Learning, Deep Learning, MongoDB, MySQL, PostgreSQL, Gen AI
**Cloud & DevOps**: Azure, Docker, Kubernetes, AWS, CI/CD Pipelines, Git, GitHub, VSCode, Jira, Agile, Microservices, Postman
