Lekha Reddy Surakanti

513-512-1761 | lekhareddy16@outlook.com | linkedin.com/in/lekhareddy16 | github.com/lekhareddy15 | Portfolio | Cincinnati, Ohio

Summary

Master's student in Computer Science and results-driven Full-Stack Software Engineer with proven experience building and deploying production systems, including real-time video streaming infrastructure, enterprise-level discovery platforms, and AI-powered document analysis tools. Skilled in full-stack development and cloud infrastructure (AWS, Azure), with proficiency in Python, React, and Node.js. Expertise includes designing machine learning pipelines and delivering technical solutions in Agile environments across media processing and sophisticated search technology.

Technical Skills

Programming Languages & Frameworks: Python, Spring Boot, TypeScript, Java, Next.js, Node.js, Angular, C++
Cloud & Infrastructure: AWS (Kinesis, S3, Lambda, EC2, CloudWatch), Azure (Data Pipelines & ML Services), Docker, Kubernetes
AI/ML & Data Science: PyTorch, NLP, Machine Learning, Deep Learning, Predictive Analytics, LLMs
Data Engineering: SQL, MongoDB, MySQL, PostgreSQL, Firebase
Engineering Concepts: ETL Pipelines, Data Analysis, REST APIs, GraphQL, Microservices, Agile Methodology, CI/CD, System Design
Development Tools: Git, GitHub, Postman, Jira, VS Code, Docker, Kubernetes, Copilot, Cursor

Experience

Software Engineer Intern — Temecula, CA (Remote)
Gilman Construction Media — *Nov 2025 – Mar 2026 (Expected)*

- Accelerated API response times by 25% by building and optimizing backend infrastructure for a real-time video streaming platform, utilizing AWS services (Kinesis, S3, CloudWatch) for data streaming, storage, and monitoring, combined with optimized load balancing and caching strategies.
- Increased content deployment speed by 30% and reduced manual work by 50% by creating an automated video processing pipeline that utilized machine learning models to analyze and tag video content.

Software Engineer — Cupertino, CA (Remote)
Elevance System — *Jan 2025 – Oct 2025*

- Built a full-stack document search platform using React, Python, and Node.js, applying API optimization, caching strategies, and asynchronous processing to boost search performance by 40% for 500+ users.
- Implemented NLP-based document summarization pipelines to automate analysis of lengthy files, cutting manual processing time by 30% and improving knowledge accessibility.

Software Engineer — Hyderabad, India
Brane Enterprises Pvt Ltd — *Jun 2023 – Jun 2024*

- Developed application speed by 25% for end users by creating new user interface components, optimizing SQL database queries, and building ETL pipelines from multiple sources for analytics.
- Boosted customer support efficiency by 30% by developing and deploying an AI chatbot using Python and Natural Language Processing (NLP) to respond to customer questions faster than the previous email-based system.
- Reduced customer complaints by 70% by actively fixing bugs, implementing new features based on user feedback, and establishing automated testing procedures to ensure stable and error-free deployments.

Education

University of Cincinnati — Cincinnati, OH
Master of Engineering in Computer Science, GPA: 3.75/4.0 — *Aug 2024 – Apr 2026*

Keshav Memorial Institute of Technology — Hyderabad, India
Bachelor of Technology in Computer Science Engineering, GPA: 3.69/4.0 — *Nov 2020 – May 2024*

Projects

Cryptocurrency Mobile App — *Feb 2023 – May 2023*

- Built a secure cryptocurrency trading mobile app using Flutter for the frontend and Next.js with MongoDB for the backend, enabling users to buy and sell digital assets efficiently.
- Implemented QR-based wallet transfers, MetaMask integration, and Solidity smart contracts for transaction validation, achieving 40% faster processing while maintaining strong security.

Digital Banking Platform — *Jun 2022 – Sep 2022*

- Designed and developed an online banking system using React.js, Node.js, and PostgreSQL, following a microservices architecture to handle deposits, withdrawals, and transfers via REST APIs.
- Containerized services with Docker and orchestrated using Kubernetes, adding centralized logging that reduced troubleshooting time by 35% while supporting 2,000+ daily transactions.
